CHURCH SYSTEM PROPOSAL

Prepared for
General Public

Prepared by
Ufanisi Africa
sales@ufanisiafrica.com
www.ufanisiafrica.com

Released version 2022

Executive Summary

This proposal serves as the official document from **Ufanisi ICT Solutions** for developing and deploying a **Church Web Info Management System** to your church organization. We want to render our software development expertise to you and produce a management system that will increase your organization productivity.

Problem Statement

Many churches use manual or semi-automated systems, therefore management has to put much efforts on securing those records otherwise they can be easily getting damaged, stolen, manipulated etc. Keeping these records takes much time and space although we can't trust the accuracy of calculations done manually, it's tough and time-consuming process to search for given records. There difficulties in generating accurate periodic reports and oftentimes, use manual and conventional procedures again just to verify each report's accuracy.

Proposed Solution

To address your concerns, **Ufanisi ICT Solutions** will develop and deploy a System that will address all the problems previously mentioned. The system will be implemented with more additional features that will achieve future goals of the company.

The system is a web based, therefore can be accessible anywhere that enhance easy management. Its highly portable, therefore that enhance easy installation and maintenance. It can run in any device which reduces hardware costs. The system is user friendly, very easy to use since they have simplified interfaces.

The system will store all records in a secure, efficient, convenient and simplified manner. Data retrieval will be efficient and accurate by easily allowing search for records. Reports will be generated under several categories at any time required. They will appear in a clear view with an option for both Microsoft docs and PDF format for easily integration with other data.

Security is provided to our system by having a database backup, database restoration image and crash recovery system. User IDs and Passwords are provided to prevent access of unauthorized people. This system once deployed will address current manual and semi manual systems' challenges as well as will contribute to productivity increase and reduce labor and operation costs.

The system will manage all inventory functions. All items of the organization are recorded and their status tracked. The system generates assets registry, with detailed information of each category. It adds storage facilities and records all item in stores and those issued out.

Reports will be generated under several categories at any time required. They will appear in a clear view with an option for both Microsoft docs and PDF format for easily integration with other data.

By put into consideration the presence of insecurity in internet, our team did a great work of implementing three level of security layers to ensure that the application is secured and remains legitimate to its users.

This system once deployed will address current manual and semi manual systems' challenges as well as will contribute to productivity increase and reduce labor and operation costs.

Features

The proposed system has the followings features;

- ❖ Believers Management: It manages believer registration. It manages all information of every believer.
- ❖ Church leaders and Staff Management: The system manages the registration process of all church leaders and other staff. It also manages all their information.
- ❖ Church services Management: It registers all church programs i.e worship schedules, seminars, meetings etc.
- ❖ Project Management: The system manages all projects with all their information i.e donor projects, church projects etc.
- ❖ Accounting Management: The system manages expenses and incomes. It manages all groups of expenses and incomes.
- ❖ Inventory Management: It registers all movable and non-movable assets of the church.
- ❖ Report Management: It generates all types of reports. Reports generated are in standard format. The reports can be exported to different versions i.e., PDF, word documents etc.
- ❖ The system can be customized to meet your additional needs.

Benefits

Our company has developed over 35 systems within the last five years. We make sure that each system we develop is equipped with the latest trends, tools, and technologies, of which our employees have trained and have sufficient knowledge thereof.
